EDUCATION

Dwarkadas J. Sanghvi College of Engineering: Mumbai 2024 – 2028
B.Tech, Electronics & Telecommunication · Honours in VLSI

PROJECTS

Equity Research Platform | [GitHub](#)

React · FastAPI · LangGraph · Python · Tailwind CSS · AWS (EC2, S3)

- Architected an AI-powered equity research platform processing live market data streams and delivering scalable, low-latency financial insights.
- Built a modular FastAPI microservice integrated with LangGraph for multi-step AI reasoning workflows; implemented RAG pipelines for contextual market data retrieval, consumed multiple REST APIs for live market data ingestion, and fine-tuned LLM behaviour to reduce hallucinations in stock analysis outputs.
- Designed a stateless processing pipeline for high-frequency financial data, enabling high-throughput processing under sustained load.
- Deployed cloud infrastructure on AWS EC2/S3 supporting concurrent API requests with consistent low-latency backend services.
- Surfaced context-aware LLM investment recommendations through interactive React dashboards with Recharts, enabling real-time portfolio analysis and stock visualisation.

NeuroFin: AI Financial Assistant | [GitHub](#) | [Demo \(System Walkthrough\)](#)

React · Python · LangGraph · AWS Lambda · S3

- Architected an agentic AI financial assistant using React and LangGraph; implemented RAG pipelines for grounded financial reasoning, integrated multiple REST APIs for financial data, and fine-tuned chatbot behaviour to reduce hallucinations, enabling reliable conversational forecasting across budgeting, investments, tax optimisation, and goal tracking.
- Designed a behaviour-based recommendation engine adapting to user spending patterns, improving forecast personalisation over time.
- Implemented an adaptive feedback loop enabling the model to self-correct predictions, measurably reducing recommendation drift across sessions.
- Containerised with Docker and deployed serverless backend on AWS Lambda with S3-backed persistence, achieving sub-200ms latency under concurrent load.
- Integrated a festive financial planning module and expense classification engine, extending the assistant's decision-support coverage beyond standard budgeting workflows.

Mentora: AI Mentor-Mentee Platform | [GitHub](#)

Next.js 14 · TypeScript · Prisma ORM · PostgreSQL · OpenAI API

- Built an LLM-powered mentor-mentee matching platform using Next.js 14 and Prisma ORM, sending structured user profile data to an LLM API for compatibility scoring and ranking.
- Implemented a real-time bidirectional chat system supporting concurrent mentor-mentee sessions with low-latency message delivery.
- Generated personalised learning paths dynamically using LLM outputs, adapting recommendations to each user's skill level, progress, and stated goals.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++

Frontend: React, Tailwind CSS, Framer Motion, Next.js

Backend: FastAPI, Node.js, Express.js, PostgreSQL

AI / ML: LangGraph, OpenAI APIs, Pandas, NumPy, RAG

Cloud: AWS, Firebase, GCP

Tools: Git, GitHub, Docker, VS Code

ACHIEVEMENTS & ACTIVITIES

- Amazon 10000 AI Ideas Challenge:** Selected as top 300 semi-finalist from 115 countries and 10,000+ submissions, built and deployed a prototype app on AWS Free Tier as part of the judging process.
- Mumbai Hacks:** Conceived and shipped a full-stack AI product at Mumbai Hacks 2024, competing among 3,000+ participants across 300+ teams.
- Odoo Hackathon:** Delivered an ERP-adjacent feature suite end-to-end within competitive time constraints.
